Find the pitch in any business website

Shopa Marketing Assistant is a Chrome extension. Open any business website, click one button, and it reads the page and tells you what the business is doing well, what is missing, and which Shopa services could help. You walk into a sales conversation with real evidence instead of guesses.

How to use it in four steps

1
Open the website
Go to the business's website in Chrome, for example a dental clinic in Melbourne.

2
Click the Shopa icon
The small window shows the site name and "Ready to analyse".

3
Pick an action
Generate Report makes the client report. *Quick Analysis* shows a short summary. *Dashboard* opens the full view.

4
Read and share
Use the dashboard menu on the left to go through each section, then print or copy the report.

What each section does

Overview

Start here

A one-screen summary of the whole website.

- The business name, type and location found on the site.
- A score for each area (Website, SEO, Social) so you can see the weakest spot at a glance.
- **Marketing opportunities:** the top problems found, each with the proof from the page.
- **Recommended Shopa services:** services that could fit. This is a suggestion, not a confirmed need.

Website

Website project pitch

Everything you need to pitch a new or refreshed website.

- What the site is built with (WordPress, Wix, Shopify and so on) and whether it looks outdated.
- How old the site is, when it was last updated, and who the domain and hosting providers are.
- Page speed, mobile friendliness and design freshness, measured on your visit and with Google PageSpeed.
- A clear verdict: strong upgrade opportunity, refresh worth proposing, or in reasonable shape.

SEO

Google rankings

Answers one question: **when local customers search on Google, does this business show up, at what position, and who shows up instead?**

1. **Where:** the suburbs, cities or pincodes from the site's address are ticked for you. Add more if needed (up to 6).
2. **What:** the services the business sells are suggested from its page, including a "best …" search such as "best child care in Colyton". Add your own or click *More ideas from Google* (up to 15).
3. **Check the country and depth:** the Google country is detected from the site. Choose how many Google pages to look through (page 1 to 3).
4. **Run the searches:** each service is searched in each place, the way a real customer would. Leave the Google tab open. If Google asks "are you a robot", tick it and checking carries on.
5. **Rankings by location:** a table shows the position for every service and place, for example "#4" or "not on page 1–2".
6. **Competitors:** see who ranks above the business, where those competitors are based, and a side-by-side comparison. Tick "Local competitors only" to see only nearby rivals.

Social

Social media

Shows which social platforms the website links to: Facebook, Instagram, LinkedIn, YouTube, TikTok and others.

- Each platform shows "Detected" with the link, or "Not detected on this page".
- "Not detected" only means the website does not link to it. The business may still have an account, so check before you say it.
- Follower numbers and how often they post are not checked. Look at the profile yourself if it matters for the pitch.

Sales Talking Points

For the meeting

A short, friendly 1–2 page client report, plus what to say.

- **The report** (for the client): their website at a glance, marketing at a glance, what is working well, the top improvements and suggested next steps.
- **Talking points** (for you only, not printed): an opening pitch and one simple sentence for each improvement.
- Buttons: *Copy Talking Points*, *Export*, and *Print / Save PDF* to send the report to the client.

Full Report

Detailed version

A longer opportunity report covering every check, with the evidence behind each finding. Use it when the client wants detail or for your own notes. Print it or save it as a PDF.

Settings

Gear icon

- **Contact line:** your email and phone, printed on the client report.
- **Online lookups:** lets the extension check domain age, hosting, page speed and Google rankings. Keep it on.
- **Google PageSpeed key** (optional): gives more reliable speed scores.
- **Recent analyses** are saved in your browser, so you can reopen a site from the popup without analysing it again.

A simple way to run a sales call

1
Before the call
Analyse their site and read the Overview. Note the weakest score.

2
Show the proof
Open SEO and show where they rank in their own suburb, and who beats them.

3
Explain the fix
Use the Talking Points and the recommended services to say how Shopa helps.

4
Leave the report
Print or email the 1–2 page client report as a follow-up.

What you can trust

- Everything comes from the real website and real Google searches. Nothing is made up.
- Each opportunity shows the proof found on the page.
- Rankings show what Google showed at the time of the check.

Good to know

- Only the page you open is read, not the whole site. Analyse the home page for the best picture.
- "Not detected" means not found on this page, not "does not exist".
- Rankings can change daily and differ by location and device.
- Scores are guides for the conversation, not official ratings.

Words you will see

SEO: getting found on Google without paying for ads.

Keyword: the words a customer types, such as "dentist Melbourne".

Ranking / position: where the site appears in Google results. #1 is the top.

Competitor: another business that appears for the same searches.

Page 1: the first 10 results, where most people click.

Page speed: how fast the site loads. Slow sites lose visitors.
